

alfa-set dme

Center height measurement with camera

No contact measuring of center height on turning tools just with a mouse click!!

Electronic measurement of center height on turning tools with an additional in X-axis fixed 2nd camera with LED-incident light. The cutting edge will be displayed in the 12.1" TFT-color-touchscreen in up 20 / 40 or 80-times magnification.

With a mouse click on the cutting edge, the measured value appears on the screen. The maximal measuring range is + / - 3 mm from tool center.

Within this range it's possible to measure radii and angles by mouse click.

All alfa-set presetters alfa-set 23/25/44/46/64 and 66 with the image processing systems vision 2, vision 4 and the PC-Version vision 5 can be equipped with the center height measuring option "dme".

alfa-set has to be equipped with the option „4x90°-Indexing“ art-no 104446-50!

For further information see brochure alfa-set 23/44.
